Abstract — This quantitative research aimed at 1) comparing the mean difference of employee creative working behavior categorized by personal factors, 2) comparing the mean difference of organizational sustainability categorized by personal factors, and 3) investigating the effects of employee creative working behavior on organizational sustainability. The samples included 401 employees working in logistics service providers in Bangkok and Metropolitan area, Thailand. The data was collected by using a questionnaire with convenient random sampling technique. Data analysis used both descriptive statistics including frequency, percentage, mean and standard deviation and inferential statistics including independent sample t-test, One-Way ANOVA and stepwise multiple regression analysis at the statistically significant level of 0.05. The findings indicated that employees with different personal factors have different opinion level on employee creative working behavior and organizational sustainability. In addition, employee creative working behavior had a positive effect on organizational sustainability at the statistically significant level of 0.05. The study indicated that the organization should focus and understand employees' personal factors and promote employee creative working behavior in order to create organizational sustainability.

Keywords - Employee Creative Working Behavior, Organizational Sustainability, Logistcis Service Providers

I. INTRODUCTION

Organizational sustainability is the most desired achievement by all organizations because it allows them to meet environmental, societal, and economic needs [1]. This includes achieving business and operational excellence, resource optimization, social development, organizational reputation, employee relations, and health, as well as reducing waste and pollution and increasing energy efficiency [2]. Many variables may have an impact on an organization's long-term viability. Innovation, incivility environment, and teamwork may all have an impact on an organization's long-term viability, according to Yang [3]. Horak, Arya, and Ismail [4] also discovered that organizational culture has an impact on the organization's long-term viability. Organizational trust, employeeorganization relationships, and creative behavior, according to Yu et al. [5], may all have an effect on organizational sustainability. Green human resource management techniques, according to Amjad et al. [6], may impact organizational sustainability. Digitalization, according to Isensee et al. [7], may be linked to sustainability.

One of significant factor affecting the sustainability of the organization can count on employee creative working behavior [5,8]. Many organizations attempt to employee creative working behavior in order to achieve the sustainable outcomes. The employee's creative working behavior emphasizes on building the behavior of the employees to explore the opportunities to find new knowledge, ideas, and experiences, to generate idea, to inspire others and to apply new ideas into uses in order that the organizations can achieve environmental, societal, and economic goals [1,9,10]. Many companies, including banking, information technology, and healthcare, have used employee creative working behavior to improve organizational performance, competitiveness, sustainability, and profitability [11,12,13].

In line with importance and research questions, the researchers are interested in studying the effect of employee creative working behavior on organizational sustainability. The study area was the logistics service providers because now it becomes well-known and play significant part in national gross domestic products (GDP), which it is about 5.98 percent of Thai GDP valued about 1.008 million baht covering logistics service sector, transportation sector and warehouse. In addition, this industry had logistic cost per sale as of 13.40% [14]. The result of this study will benefit the entrepreneurs that would like to achieve organizational sustainability covering financial and non-financial aspects including energy cost reduction, reduction in waste treatment and discharge fees, organization reputation increase, higher return on operations, employee happiness and healthy, and customer satisfaction.

II. OBJECTIVES

With the study "The Effect of Employee Creative Working Behavior on Organizational Sustainability: A Case of Logistics Service Providers", the researchers set the objectives as follows:

- 1) To compare the mean difference of employee creative working behavior categorized by personal characteristics.
- 2) To compare the mean difference of organizational sustainability categorized by personal characteristics.
- 3) To investigate the effects of employee creative working behavior on organizational sustainability.

III. CONCEPTUAL FRAMEWORK

The conceptual research can be written as follows:

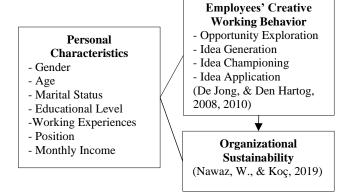

Figure 1. Conceptual framework.

IV. HYPOTHESES

The hypotheses (H) had been written as follows:

H1: Employees with different personal characteristics have different opinion level on employee creative working behavior.

H2: Employees with different personal characteristics have different opinion level on organizational sustainability.

H3: Employee creative working behavior has a positive effect on organizational sustainability.

V. LITERATURE REVIEWS

A. Employees' Creative Working Behavior

Literally, creative working behavior refers to the behavior that can stimulate the intrinsic motivation of followers and make this consistent with their work motivation, thereby producing creative work behavior and leading to the more effective achievement of organizational goals [15]. There are 4 dimensions in creative working behavior including opportunity exploration, generation, idea championing, and idea application [9,10]. Meanwhile, Hsiao et al. [16] defined and categorized innovative work behavior into 3 categories including idea generation, idea promotion and ideal realization. However, opportunity exploration means the behavior that seeks the opportunity to learn something new or finds some problems as well as studies for some gaps of business service operation. In addition, it includes looking for ways to improve current products, services or processes or trying to think about them in alternative ways. Meanwhile, idea generation refers to the ability of employees to link the creative idea to new products, services or processes, in order that the employees can enter into new markets, nre opportunity and new challenges. In addition, idea championing refers to the ability that the employees can inspire others by their ideas that can be needed to be promoted as they often do not match what is already used in their work group or organization. Lastly, idea application refers to the ability of the employees to apply the idea into action or to make ideas happen [9,10]. Based on the literature reviews, there are many researchers speak about the factors including creative working behavior. For example, Javed et al. [17] revealed that inclusive leadership was positively related to innovative work behavior both directly and indirectly through psychological empowerment. In addition, Javed et al. [18] suggested that openness to experience was positively related to innovative work behavior. For sustainability, Yu et al. [5] and Li et al. [8] advocated that innovative behavior can positively link to organizational sustainability. Additionally, Nasifoglu Elidemir, Ozturen, and Bayighomog [19] mentioned that innovative behaviors and employee creativity can influence sustainable competitive advantage meaning that employee innovative behaviors can generate substantial returns to service organizations.

B. Organizational Sustainability

Organizational sustainability refers to an organization's ability to achieve its goals in terms of environmental, societal and economic perspectives in their operations [1]. Meanwhile, organizational sustainability can cover resource optimization, waste reduction, and emissions reduction, business and operational excellence, corporate citizenship and social development, research and innovation, procurement, supply chain, and logistics, governance, sustainability management tools, employee relations, and health [2]. In addition, Braccini and Margherita [20] indicated that organizational sustainability can consider triple bottom line through the improvement of productivity and product quality, continuous energy consumption monitoring, and safer work environment and less intense work-load and job enrichment. The are many factors that can affect the sustainability of the organization. For example, Sueldo [21] indicated that integrated organizational communication can have an impact on organizational sustainability. Meanwhile, Horak, Arya and Ismail [4] found that organizational culture can influence the sustainability of the organization. Then, Yu et al. [5] studied 63 companies (small and medium clothing design industry) located at Ningbo, Hangzhou, and Shanghai in China and found that there was a relationship among organizational trust, employee-organization relationship and innovative behavior from the integrated perspective of social exchange and organizational sustainability. Lastly, Amjad et al. [6] studied about 6 textile industries and discovered that green human resource management practices can have influences on organizational sustainability.

VI. RESEARCH METHODOLOGY

A. Population and Samples

Population in this study were of 240,600 employees working in logistics service providers located in Bangkok and Metropolitan area, Thailand, and there were of 401 employees being selected to be study samples [22].

B. Research Tools and Data Collection

Closed-ended questionnaires with three components were utilized by the researchers. The first section of the questionnaire consisted of check-list questions regarding personal factors such as gender, age, marital status, educational level, job experience, position, and monthly income. The second and third parts of the survey included five rating scale questions (1-5 Likert scale) on employee creative working behavior including opportunity exploration, idea generation, idea championing, and idea application and organizational sustainability. The score with 1 referring to "not at all agreeable", 2 referring to "slightly agreeable", 3 referring to "moderately agreeable", 4 referring to "highly agreeable" and 5 referring to "extremely agreeable". In obtaining the data, the convenience sampling was employed.

C. Validity and Reliability

For validity check of questions used in the questionnaires, the researchers had experts in related fields inspect the accurate and consistency of contents and recommend for improvement and edition. For reliability check, the finding discovered Cronbach's alpha coefficient of 0.811 for opportunity exploration, 0.755 for idea generation, 0.771 for idea championing, 0.792 for idea application, and 0.829 for organizational sustainability. This means that the data derived from this survey questionnaire can be proceeded to have further study [23].

D. Data Analysis

To investigate personal factors, researchers used descriptive statistics such as frequency and percentage to evaluate data generated from samples. In addition, the study used mean and standard deviation to examine the employees' perceptions of employee creative working behavior and organizational sustainability; Table I describes the opinion level interpretation. In addition, the hypotheses were investigated using inferential statistics such as the independent sample t-test, one-way ANOVA, and stepwise multiple regression analysis.

TABLE I. OPINION DEGREE INTERPRETATION, CALCULATED AS TO BE (5-1)/5=0.80

| Range of Mean | Interpretation |
|---------------|--|
| 1.00 - 1.80 | Employee does not agree with the statement. |
| 1.81 - 2.60 | Employee slightly agrees with the statement. |
| 2.61 - 3.40 | Employee moderately agrees with the statement. |
| 3.41 - 4.20 | Employee highly agrees with the statement. |
| 4.21 - 5.00 | Employee extremely agrees with the statement. |

VII. RESULTS

The study "The Effect of Employee Creative Working Behavior on Organizational Sustainability: A Case of Logistics Service Providers" had been conducted and analyzed by using the descriptive and inferential statistics. The details had been portrayed as follows:

A. Study of Respondents' Personal factors

TABLE II. FREQUENCY AND PERCENTAGE OF RESPONDENTS'
DEMOGRAPHICAL DATA

| Respondents' Demographical Data | Person (s) | Percentage |
|---------------------------------|------------|------------|
| Gender | | |
| - Male | 175 | 43.6 |
| - Female | 226 | 56.4 |
| Age | | |
| - Lower than 21 years old | 100 | 24.9 |
| - Between 21- 30 years old | 142 | 35.4 |
| - Between 31- 40 years old | 126 | 31.4 |
| - Between 41- 50 years old | 31 | 7.7 |
| - More than 51 years old | 2 | 0.5 |
| Marital Status | | |
| - Single | 221 | 55.1 |
| - Married | 166 | 41.4 |
| - Divorced | 14 | 3.5 |
| Educational Level | | |

| Respondents' Demographical Data | Person (s) | Percentage |
|---------------------------------|------------|------------|
| - Lower than bachelor's degree | 173 | 43.1 |
| - Bachelor's degree | 196 | 48.9 |
| - Master's degree | 21 | 5.2 |
| - Higher than master's degree | 11 | 2.7 |
| Working Experience | | |
| - Lower than 1 years | 71 | 17.7 |
| - Between 1-2 years | 180 | 44.9 |
| - Between 3-5 years | 113 | 28.2 |
| - More than 5 years | 37 | 9.2 |
| Position | | |
| - Manager/ executives | 10 | 2.5 |
| - Head of department / division | 15 | 3.7 |
| - Operational staffs | 376 | 93.8 |
| Income (per month) | | |
| - Less than 15,000 baht | 107 | 26.7 |
| - Between 15,001 – 20,000 baht | 249 | 62.1 |
| - Between 20,001 – 35,000 baht | 31 | 7.7 |
| - More than 35,001 baht | 14 | 3.5 |
| Total | 401 | 100.0 |

From the study shown in Table II, it found that most of the respondents were female (226 persons or 56.4%), aged between 21-30 years old (142 persons or 35.4%), were single (221 persons or 55.1%), obtained bachelor's degree (196 persons or 48.9%) and had working experience between 1-2 years (180 persons or 44.9%), worked as operational staff (376 persons or 93.8%), and had monthly income between 15,001 – 25,000 baht (249 persons or 62.1%).

B. Study of Employees' Creative Working Behavior and Organizational Sustainability

From the study shown in Table III, it found that the employees' creative working behavior was rated in extremely level. When considering into each aspect: opportunity exploration, idea generation, idea championing and idea application, they were rated in extremely level too.

In addition, study indicated that organizational sustainability was rated in extremely level.

C. Hypothesis Testing

• H1: Employees with different personal factors have different opinion level on employee creative working behavior.

TABLE IV. STUDY RESULTS OF INDEPENDENT SAMPLE T-TEST AND ONE-WAY ANOVA OF HYPOTHESIS 1

| Income | Sig = | Sig = | Sig = | Sig = | Sig = | | |
| | .002 | .130 | .125 | .575 | .001 | | |

From the study shown in Table IV, it found that the employees with different personal factors including gender, age, marital status, educational level, working experiences, position, and monthly income have different opinion level on employee creative working behavior at the statistically significant level of 0.05. However, the study found that the employees with different gender and marital status do not have different opinion level on employee opportunity exploration. Meanwhile, employees with different working experience and monthly income do not have different opinion level on employee idea generation. In addition, employees with different marital status, educational level, and monthly income do not have different opinion level on employee idea championing. Lastly, employees with different marital status, educational level, working experience, and monthly income do not have different opinion level on employee idea application.

 H2: Employees with different personal factors have different opinion level on organizational sustainability.

TABLE V. STUDY RESULTS OF INDEPENDENT SAMPLE T-TEST AND ONE-WAY ANOVA OF HYPOTHESIS 2

| Personal factors | Organizational Sustainability |
|---------------------|-------------------------------|
| Gender | T = 1.677 |
| | Sig = .094 |
| Age | F = 3.985 |
| | Sig = .000 |
| Marital Status | F = 2.093 |
| | Sig = .008 |

| | Sig = .002 |
| Position | F = 2.690 |
| | Sig = .000 |
| Monthly Income | F = 2.024 |
| | Sig = .011 |

From the study shown in Table V, it found that the employees with different personal factors including gender, age, marital status, educational level, working experiences, position, and monthly income have different opinion level on organizational sustainability at the statistically significant level of 0.05.

 H3: Employee creative working behavior has a positive effect on organizational sustainability.

TABLE VI. PEARSON CORRELATION ANALYSIS OF SERVICE INOVATION AND CUSTOMER SATISFACTION

| Model | Organizational Sustainability | | | | | | |
|----------------------------|--------------------------------|---------------|---|-------|---------|--|--|
| | Unstandardized Coefficients | | Standardized Coefficients | t | Sig. | | |
| | В | Std. Error | Beta | | | | |
| Constant | .738 | .211 | | 3.497 | .001 | | |
| Idea Application | .289 | .050 | .282 | 5.791 | .000 | | |
| Opportunity Exploration | .217 | .052 | .210 | 4.189 | .000 | | |
| Idea Championing | .171 | .057 | .166 | 2.980 | .003 | | |
| Idea Generation | .134 | .049 | .135 | 2.711 | .007 | | |
| | | | = 0.410, F = 70.49 n = 1.803, Sig. = . | | rror of | | |

From the study shown in Table VI, it found that the employee creative working behavior in terms of idea application, opportunity exploration, idea championing, and idea generation, has a positive effect on organizational sustainability at the statistically significant level of 0.05.

Overall, the model has correlation coefficient (r) as of 0.645. The adjusted R^2 was as of 0.422, meaning that the model can accurately predict the green supply chain management as of 42.2%. In addition, the model has standardized coefficients (β) ranging from 0.282 to 0.135. Align with these values, the idea application can most significantly affect the organizational sustainability with regression weight as of 0.282 or accounted for 28.2%. Then, it was followed by opportunity exploration which can significantly affect the organizational sustainability with

regression weight as of 0.210 or accounted for 21.0%. Meanwhile, idea championing can significantly affect the organizational sustainability with regression weight as of 0.166 or accounted for 16.6%. Lastly, Idea generation can significantly affect the organizational sustainability with regression weight as of 0.049 or accounted for 4.9%. Consequently, the model can generate the equation with unstandardized coefficients as follow:

Y = .738 + .289 (Idea Application)

- + .217 (Opportunity Exploration)
- + .171 (Idea Championing)
- + .134 (Idea Generation)

VIII. DISCUSSION, LIMITATION AND RECOMMENDATION

A. Discussion of the Study

Employees with various personal characteristics such as gender, age, marital status, educational level, work experiences, position, and monthly income have varied opinions on employee creative working behavior and organizational sustainability at the statistically significant level of .05. This is due to the fact that personal variables may influence the development of creative working behavior. Employees with more expertise, for example, will be able to supervise and see the idea to seek something new that would assist the job linked to sustainability. Employees may use their expertise to develop creative ideas and apply them to their job and solve issues, similar to variables linked to educational level, ensuring organizational sustainability. Another example takes speaking about the position of the employees. The different position can link to the different roles of employees, the managers need to spend more time in seeking more opportunities to learn new things in order to be used for work development and implementation as well as to play a key role in motivating and encouraging their subordinates. The results of the study are supported by various literatures. For example, Pauw et al. [25] advocated that there was a relationship of effectiveness of education on sustainable development. Furthermore, the study done by Anne Støren [26] advocated that there was an association between educational level and innovativeness. Interestingly, the study about gender differences in the creativity-academic achievement relationship from China from Zhang, Ren and Deng [27] also supported that gender differences regarding which aspects of creativity were related to academic achievement were also found. However, the study results are in contrast from the study about creative behavior and impact on achieving lean strategy in organizations done by Hamdan, et. al. [28], which advocated that there were no statistically significant differences between employee's creative behavior and personal factors including gender, age, education, and specialty.

The employee creative working behavior in terms of idea application, opportunity exploration, idea championing, and idea generation, has a positive effect on organizational sustainability. This is because employees who have a creative working style seek and gather new

information from a variety of sources to apply to their jobs can contribute to the organization's success by lowering energy costs, lowering waste treatment and discharge fees, increasing reputation, increasing employee happiness, and improving employee health. The study done by Yu et al. [5] also mentioned that innovative behavior from the integrated perspective of social exchange can positively link to organizational sustainability. Additionally, Li et al. [8] indicated that employees' innovative behavior can link to organizational sustainability. Lastly, Nasifoglu Elidemir, Ozturen, and Bayighomog [19] mentioned that innovative behaviors and employee creativity can influence sustainable competitive advantage meaning that employee innovative behaviors can generate substantial returns to service organizations. According, creating creative behavior and organizational sustainability requires other factors to support such as transformational leadership, organizational trust, organizational culture and so on.

B. Limitation of the Study

This research solely looked at workers who work for logistic service providers, ignoring those who work in other industries. Furthermore, the researchers' focus in this study was on how employee creative working behavior affects organizational sustainability. Other variables, such as cultures, motivation, organizational and other considerations, may, nevertheless, have a role in organizational sustainability. In addition, the hypothesis was tested utilizing quantitative research methods such as One-Way ANOVA and stepwise multiple regression. The interview and other qualitative studies are not taken into account.

C. Recommendation

For Practitioners

In order to improve creative working behavior and organizational sustainability, the practitioners can apply the following recommendations.

- 1) The organizations should design the activities for their employees to have opportunities to utilize their knowledge and creativity. This includes special projects or new project development.
- 2) The organizations should design the activities that encourage employees in the organization to learn and explore new knowledge benefiting their works. This can include seminar or training arrangement, meeting before daily works as well as electronic knowledge platform such as websites, e-learning, and others.
- 3) The organizations should encourage employees to think creatively and share new ideas to other colleagues such as conducting the meetings that employees can participate, assigning more challenging works related to environmental logistics or others.
- 4) The organizations should understand assign the works that are matched with employees' personal factors such as gender, age, martial status, educational level, working experiences, position, and monthly income. This is

because different personal factors can generate different creative working behavior and organizational sustainability.

• For Future Studies

There are more opportunities for the future research to develop the study by following recommendation:

- 1) There should be a study related to organizational cultures, motivation, and other considerations that can also positively affect creative working behavior and organizational sustainability.
- 2) There should be a depth interview with the employees in order to gain insight of data which it will be very much advantageous to generate more appropriate strategies to improve creative working behavior and organizational sustainability.
- 3) For further study this should investigate creative working behavior and organizational sustainability with personal OKR and operation's KPI for sustainability evaluation.
